SUMMARY

Full-stack developer and project leader with three years of experience shipping production web applications on Next.js, TypeScript, and Supabase, and leading cross-functional engineering teams from architecture through delivery. Combines hands-on technical execution with project management, stakeholder communication, and team leadership.

TECHNICAL SKILLS

Languages & Frontend: JavaScript, TypeScript, HTML5, CSS3, React, Next.js, Tailwind CSS, Redux, ShadCN UI, Material UI, Chakra UI, jQuery

Backend & Automation: Node.js, Express.js, Hono.js, PHP, Laravel, n8n Automation

Databases & ORMs: PostgreSQL, MySQL, MongoDB, Supabase, Firebase, Prisma

Tools & Platforms: Git, GitHub, Vercel, WordPress, Elementor

WORK EXPERIENCE

Part-Time Software Engineer

March 2026 – Present

Adobo Super Software Inc.

- Develop and maintain cloud-based ERP web applications for inventory, order, and sales management, streamlining daily operations for client businesses.
- Implement new features, resolve defects, and optimize performance to improve system reliability and user experience.
- Collaborate with engineers, designers, and product stakeholders in an agile environment to deliver scalable enterprise solutions.
- Contribute across frontend and backend development using modern web technologies, following clean coding standards, code reviews, and testing practices.
- Balance part-time engineering responsibilities with academic commitments while consistently meeting deadlines.

Project Manager & Deputy Chief Technology Officer

September 2023 – Present

Today's Carolinian

- Lead project management and full-stack development for a ~15-person Web Development team, overseeing planning, delegation, and delivery across multiple applications.
- Build and maintain projects using Next.js, Supabase, and Tailwind CSS, balancing scalability with performance.
- Own stakeholder communication and cross-team coordination to meet tight deadlines and shifting requirements.
- Resolve leadership and workflow challenges by clarifying scope, delegating effectively, and fostering collaboration across teams.
- Delivered a university-wide platform for annual intramurals, receiving positive feedback from stakeholders.

Full-Stack Software Developer

September 2024 – January 2025

Freelance

- Developed custom web-based software tailored to client needs, improving customer engagement and business efficiency.
- Secured projects through referrals and maintained strong, long-term client relationships.
- Worked across Next.js, Supabase/Firebase, Prisma, Laravel, MySQL, and React Inertia stacks depending on client requirements.
- Managed miscommunication, scope negotiation, and tight deadlines through structured clarification meetings and organized project tracking.
- Completed 4 client projects, helping businesses increase customer traffic and online presence.

PROJECTS

Herald IdP — Today's Carolinian SSO Platform

Project Manager & Software Architect

- Led a cross-functional team of 10+ developers to design and deliver a centralized Identity Provider enabling Single Sign-On across Today's Carolinian's ecosystem of applications.
- Architected a Turborepo monorepo separating a Next.js frontend and Hono.js auth microservice, sharing TypeScript type and utility packages to keep both apps in sync.
- Directed sprint-based delivery, coordinating scope, task delegation, and stakeholder requirements across frontend, backend, and integration workstreams.
- Established engineering standards and infrastructure, including CI/CD pipelines, branch/commit validation, shared ESLint/TypeScript configs, and Git hooks via Lefthook.
- Designed the system's core architecture: position-based access control (ABAC), cross-subdomain session management, audit logging, and bulk user provisioning.
- Built with Next.js, Hono, BetterAuth, Firestore, Turborepo, TypeScript, Zod, and Vercel KV (Redis), deployed on Vercel as the shared login layer for the TC platform, serving 200+ active users.

USC Days Scoreboard

Project Manager & Full-Stack Developer

- Led a team of developers to build a score-tracking system for USC's annual intramurals.
- Managed project planning, task delegation, and stakeholder requirements to ensure timely delivery.
- Developed user authentication, score updates, game scheduling, a champions page, and admin management.
- Built with Next.js, Supabase, Prisma ORM, Tailwind CSS, Zustand, ShadCN, and Zod for scalability and efficiency.
- Deployed and adopted university-wide, now an annual tool for USC Days.

Digital Archives — Today's Carolinian

Project Manager & Full-Stack Developer

- Led a team of developers to build a digital archive for the university's historical publication content.
- Built with Next.js, Supabase, Prisma ORM, and Tailwind CSS for performance, scalability, and responsive design.
- Implemented user authentication and admin-restricted content management for secure, controlled access to archives.
- Designed an intuitive UI enabling users to search and browse past articles with ease.
- Launched and adopted university-wide as a key platform for preserving and accessing historical publication content.

Archdiocese of Cebu — Official Website

Lead Developer & Project Manager (Volunteer)

- Developed the official website for the Roman Catholic Archdiocese of Cebu from scratch, under the guidance of CADComM, the archdiocese's digital team.
- Built with WordPress to serve as the central digital hub for clergy, the Catholic faithful, and visitors across the archdiocese.
- Integrated an announcements section, a circulars and memoranda repository, news, multimedia galleries, and full directories of clergy, parishes, and institutions.
- Deployed and actively maintained, supporting communication for one of the Philippines' most significant Catholic archdioceses.

EDUCATION

BS Information Technology — University of San Carlos

- Relevant coursework: Full Stack Web Development, System Analysis and Design, Programming, Object-Oriented Programming.
